Monday 19 September 1988

Dear Professor Pomberger,

enclosed is a copy of EWD1029, by W.H.J. Feijen and me, for publication in "Structured Programming", which we had promised to write during the summer. This, however, we forgot to do, and I had to write it here after I found your reminder; fortunately, I had a vivid recollection of our discussions on the topic. I mailed my draft last week to Feijen, I called him this morning and incorporated his suggestions for improvement.

Aren't we working in a lovely field? I think it absolutely fascinating that after decades of programming it is still possible to write about such well-known and simple problems an article that will surprise most readers!

With my greetings and best wishes,

yours ever,
Edsger W. Dijkstra
